

Groovy Test:

We would like to see an export file with the calculated amount of bananas which are available on the day of this exercise.

For this exercise you have 3 files:

- input file: FruitExport\_20220601.json
- helper file: FruitColorMap.json
- output example: FruitOutput\_20220601\_100005.json

Requirements:

- Read the data from the input file
- Calculate the amount of bananas per color
- Retrieve the state from the helper file
- Export the combined data into a json file with the date of export

When you are finished with your assignment, please share it with us via Github or another Git platform.
